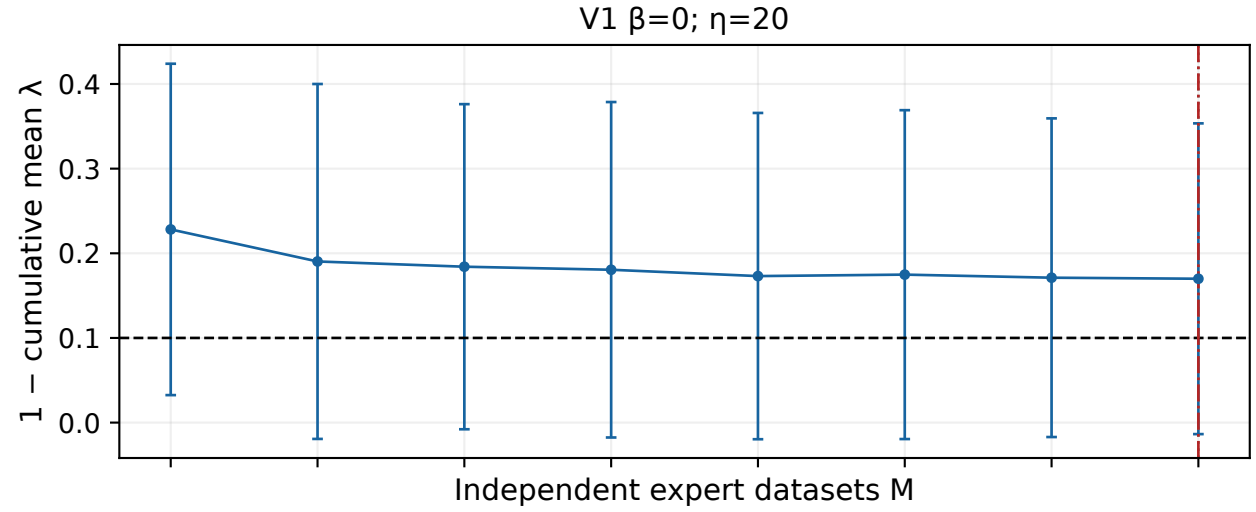
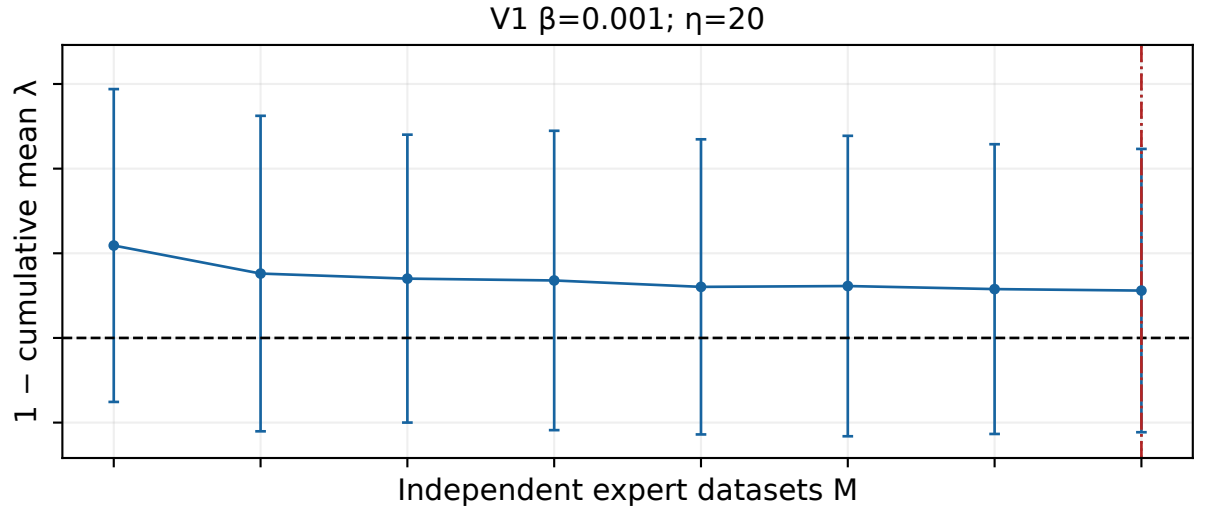
Cumulative estimation of altruism level

True altruism = 0.1 | Fixed sample M=40 | Stop M=40

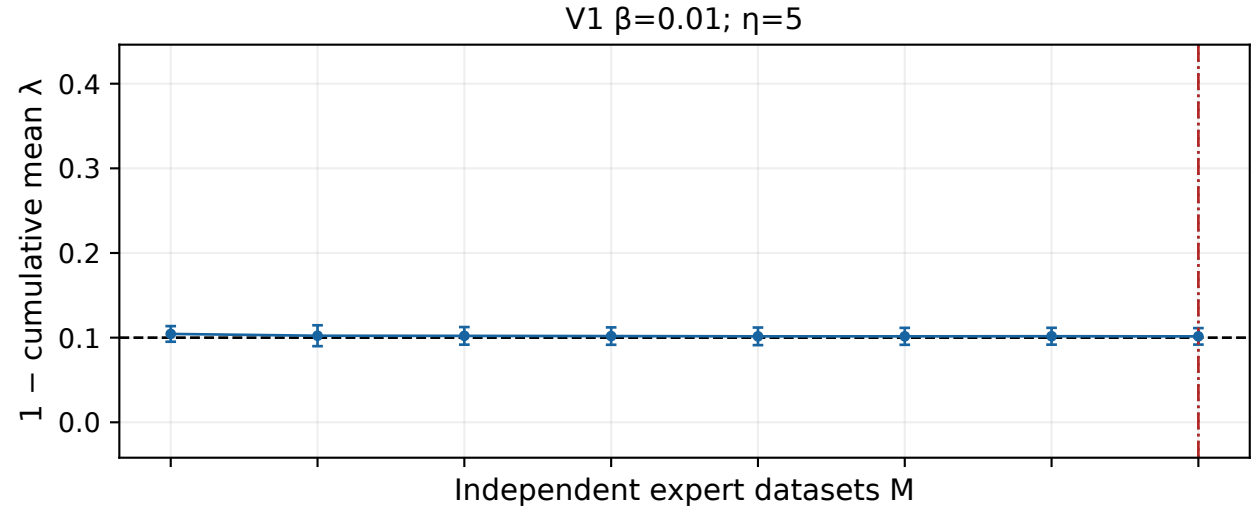
V1 β=0; η=20



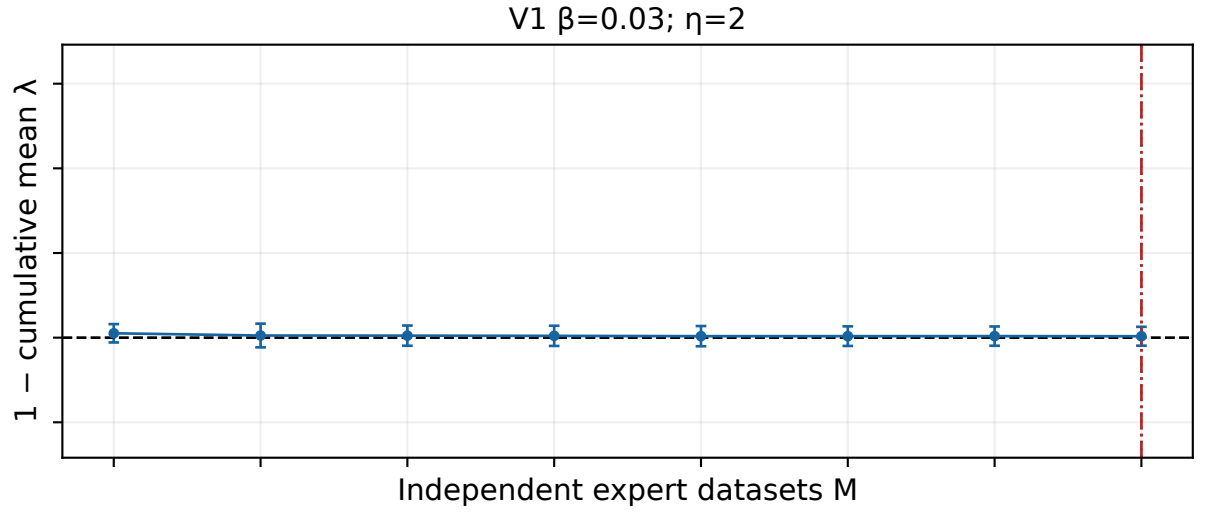
V1 β=0.001; η=20



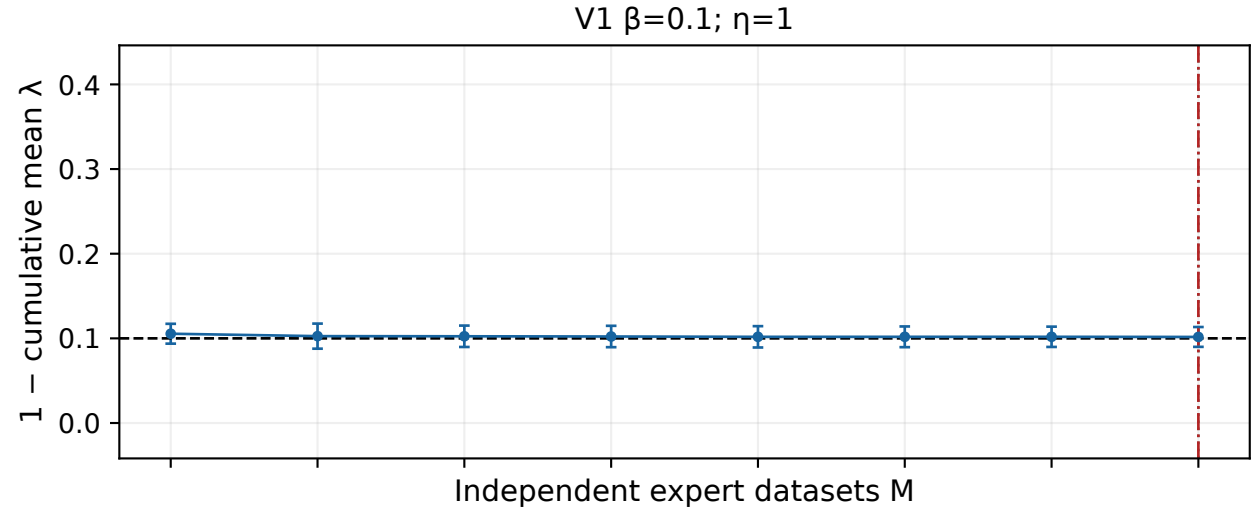
V1 β=0.01; η=5



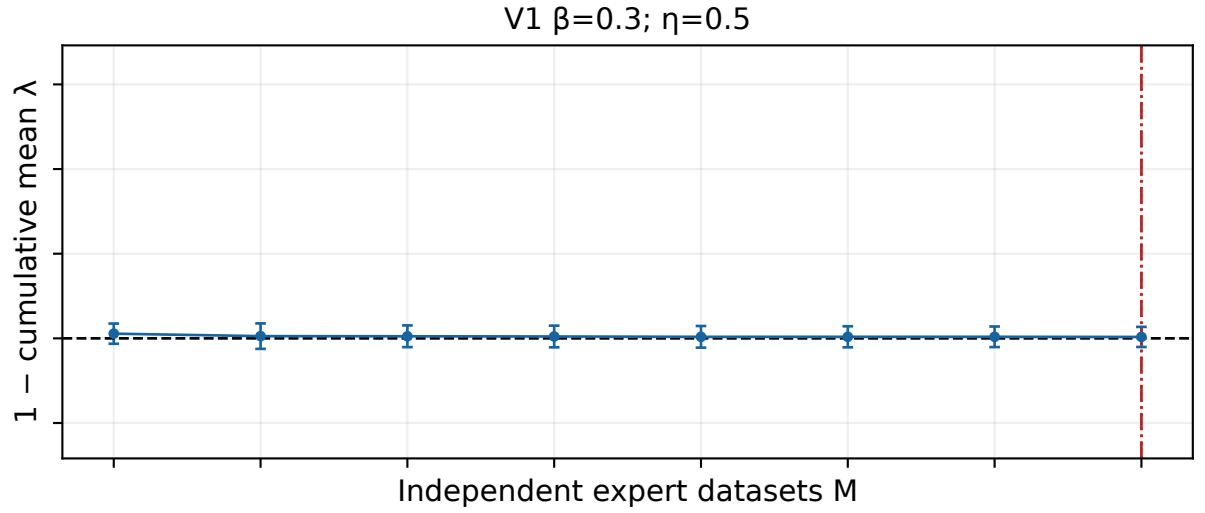
V1 β=0.03; η=2



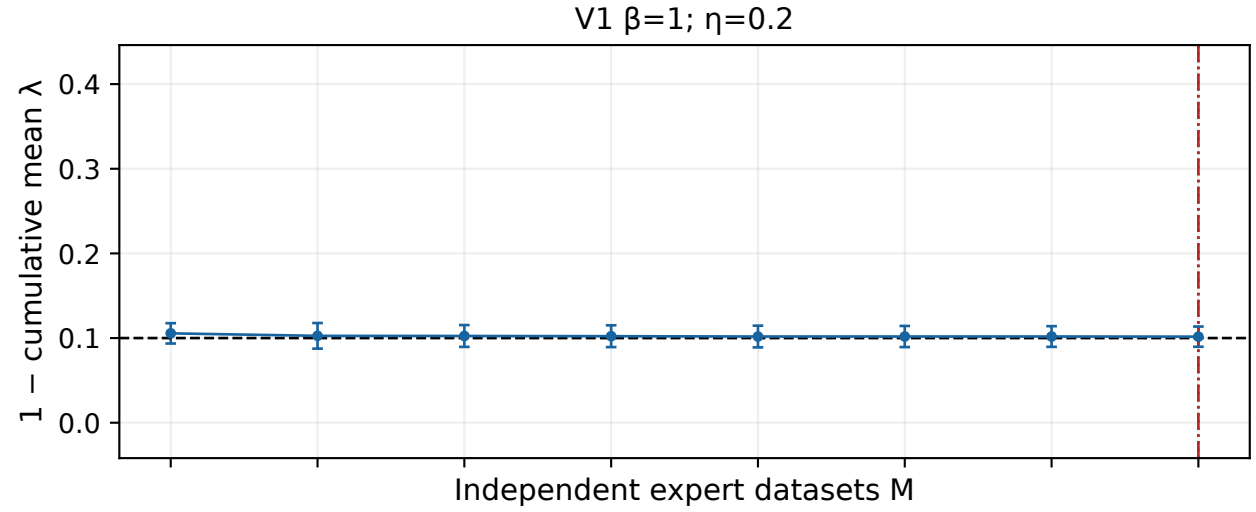
V1 β=0.1; η=1



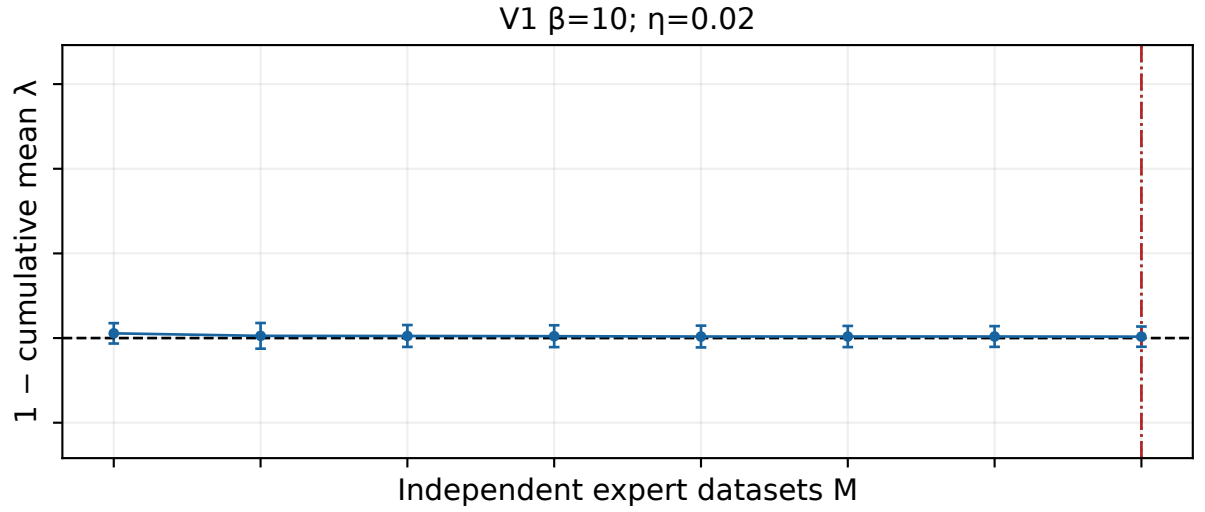
V1 β=0.3; η=0.5



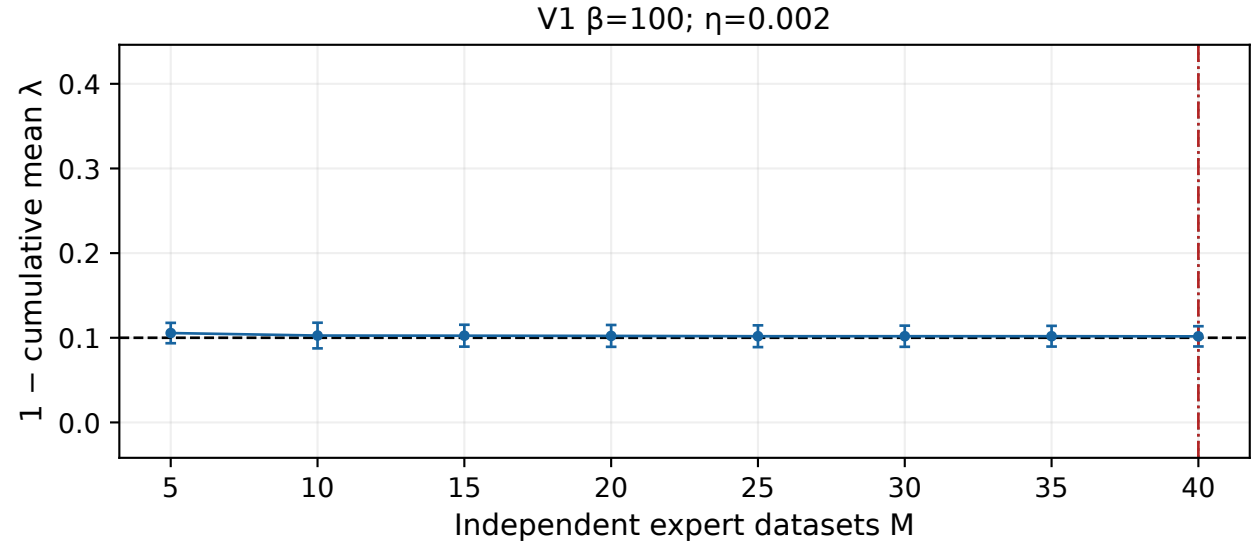
V1 β=1; η=0.2



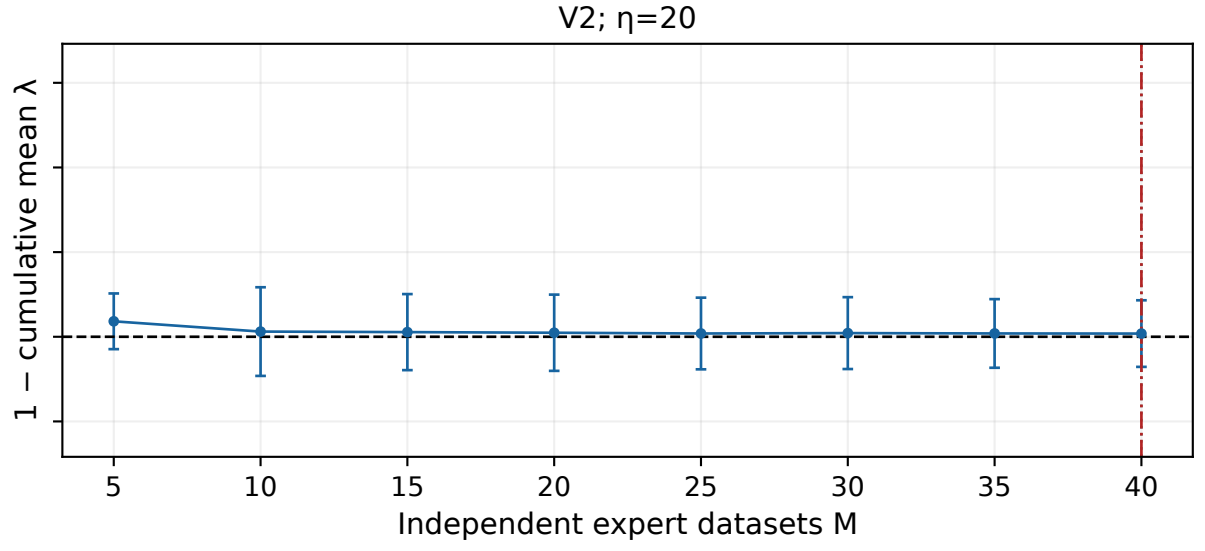
V1 β=10; η=0.02



V1 β=100; η=0.002



V2; η=20



Error bars represent ±2.58 sample SD across independent dataset-level estimates;
they are descriptive dispersion bands, not confidence intervals for the mean.
